Transight Smart Service Suite (TSSS), a complete suite of point of sale applications that is developed with scalability and flexibility in mind to suit your current or growing business needs. Developed using the same database engine (Microsoft SQL), integration between the different Transight modules are non issues. The modules can be integrated as one seamless comprehensive solution system or even installed separately as a standalone

Transight POS, a module within TSSS, is a front of store Point-of-Sale software solution designed with a vast selection of practical yet innovative features to help you serve your customers. In the competitive markets these days, TSSS provides you the edge to get ahead by simply making the handling of rush hour crowds, compiling reports and preventing fraud simple and effortless. Also, with the incorporation of touch screen technology, Transight POS helps increase speed of service to customers, registers all sales transactions, improved management control and, captures data for critical up to the minute information for analysis and decision making. In short, Transight POS makes life easier for you and gives you the piece of mind you require.

What Transight POS can provide you:-

Reliability

- Automatic failure recovery from server breakdown during unexpected transactions shutdown
- Stable and fast database. Transight SQL backup system secures data during unexpected power failures
- System that is designed to automatically replicate and synchronise all transactions and sales information when the server is restored
- Reduced down time. The new automatic backup server feature enables another terminal to be set as a backup server in the occasion where the main server breaks down

PDA Mobile Ordering

Menu Screen

Increased Security and Control

- Ability to monitor all transactions live on all terminals
- Reduces employee theft
